

The Texas-New Mexico Power (TNMP) CitySmart Program provides support to local government customers (cities/counties) through energy performance benchmarking, energy master planning, technical assistance, and cash incentives for projects that result in peak demand savings.

The CitySmart Program is designed to help participants identify energy efficiency opportunities in existing and newly planned facilities, and provide monetary incentives to implement these opportunities. The program is being offered at **no cost** to participating partners.

The CitySmart Program provides partners with:

- Energy Performance Benchmarking for existing facilities
- Energy Master Planning workshops that allow financial and facilities personnel to learn about industry best practices and determine where best to focus short and long term resources
- Technical Assistance to help identify and evaluate energy efficiency opportunities
- Cash Incentives (\$175 per kW) for new construction, renovation, *and* ongoing maintenance projects that reduce peak demand, and are completed by November 30, 2010
- Communications Support to help publicize the partner's leadership and accomplishments in energy efficiency

Please contact CLEAResult Consulting or TNMP should you have any questions about program participation. We look forward to helping your organization achieve energy and cost savings for your facilities.
